Find best furniture pairs!

What is the goal?

The goal of this study is to learn which pieces of furniture have compatible styles.

In each task, you will see six pairs of furniture pieces (e.g. a dining table and a dining chair). Your goal is to identify the pairs that are most STYLISTICALLY compatible. A pair of furniture pieces is considered to be most stylistically compatible if somebody would be most likely to put the two furniture pieces together in the same room if he was furnishing an apartment.

In each task, you are asked to select **TWO** pairs, i.e. the most compatible pair, and the second most compatible pair.

How should I do it?

You can select or unselect a pair by clicking the corresponding image. Once a pair is selected, a red box should show up. Please make sure exactly **TWO** pairs are selected in each task. An illustrative example is shown below.

This assignment contains 33 tasks. Please click the 'submit' button at the bottom of the webpage when you finish. Then, the webpage will check if exactly two items are selected in each task. Once you pass the check, then you will jump to a new webpage, which includes the confirmation code that you need to paste into the box in 'On Complete'. We will not be able to pay you unless you complete the task and input the correct...
confirmation code. This assignment will normally take 5 ~ 10 minutes.

**How do you evaluate my submission?**

Please do not fill out the answers randomly.

The tasks contain several control questions to test that you are completing the assignment honestly. If too many of the control questions are answered incorrectly, your submission will be rejected and it is possible that you will be blocked from completing any further tasks of this HIT.

**Where should I start?**

**Click here to work on the HIT (in a new tab).**

**On complete**

When you finish, please enter your completion code in the box below:
